USC students seeking entry-level tech jobs post-grad face several challenges due to saturation in applicants, limited work field experience, and lack of industry knowledge.

<u>Job Market Saturation</u>	<u>Limited Work Experience</u>	<u>Lack of Industry Knowledge</u>	<u>Skill Gaps</u>
Saturated number of applicants all competing for same entry level positions	Few have real world project experience	Insufficient understanding of which path to take in tech	Incomplete understanding or skill set for required role
Limited openings	Few get internships during school	Unfamiliarity with specific software's or skills needed	Insufficient practice in real world situations
Difficulty standing out as an applicant at this level	Course standards and projects dont always meet industry standards	Weak established network with either professionals or alumni	Lack of personal projects that stand out on resume
